

ILLUMINATION MODULE OF LIGHT EMITTING ELEMENTS

ABSTRACT OF THE INVENTION

5

An illumination module of light emitting elements is provided. The present illumination module includes a printed circuit board having a one-dimensional array of light emitting elements arranged thereon and a reflecting layer on the surface of the printed circuit board with the light
10 emitting elements arranged thereon. The reflecting layer provides reflecting means for the light emitting elements, improving utilization of the light emitting from the light emitting elements, and thus increasing the luminance of the illumination module of light emitting elements.
